

Heart Failure Medications – Must Take VS. Can Take

Adapted from Standards of Care and Updates in the Treatment of Heart Failure

By Zach Weber, PharmD, BCPS, BCACP, CDE

MUST BE TAKEN

Mortality Reducing	Morbidity Reducing
Angiotensin Converting Enzyme (ACE) Inhibitors	Diuretics [loop (preferred), thiazide]
Angiotensin Receptor Blockers (ARBs)	Ivabradine (Corlanor)
Beta Blockers (BB)	Digoxin
Aldosterone Antagonist (AA)	
Angiotensin Receptor/Nepriylsin Inhibitor (ARNI)	
Hydralazine and Isosorbide dinitrate (African American patients)	

CAN BE TAKEN

Mortality Reducing	Morbidity Reducing
Angiotensin Converting Enzyme (ACE) Inhibitors	Diuretics [loop (preferred), thiazide]
Angiotensin Receptor Blockers (ARBs)	Ivabradine (Corlanor)
Beta Blockers (BB)	Digoxin
Aldosterone Antagonist (AA)	
Angiotensin Receptor/Nepriylsin Inhibitor (ARNI)	
Hydralazine and Isosorbide dinitrate (African American patients)
